Manifesto of Molfetta for a resilient city

A resilient city is today a city that knows how to develop responses that strengthen the identity and the sense of community by transforming the " crisis " into an opportunity for renewal. The ten points of the manifesto try to collect all the important aspects connected to resilience in the government of the city. (Here following there are the ten points of the Manifesto of Molfetta for a resilient city).

A RESILIENT CITY is:

1. A city that does not accept the deaths on work, traffic and domestic accidents, making workers and citizens aware of the risks and helping them to withstand adversity.
2. A city where urban planning is built on attention to the custody of the quality of water, air and soil, essential common goods to the base of the primary needs of all citizens.
3. A city that invests in the typical products of local agriculture, protecting and promoting biodiversity, giving up the wastage of natural resources from the perspective of an " ethics agriculture".
4. A welcoming city that ensures quality of life and safety because the "right to the city" is guaranteed to all regardless of gender, age, culture, origin and state of health.
5. An attractive, creative and innovative city because it invests in culture as "food of the mind" and integral part of people's health, and therefore able to attract investment and promote economic quality development.
6. A city where civil protection is based on risk prevention, the active involvement of social voluntary and the widespread community and not only on the response to emergencies.
7. A city that knows how to involve, since the designing of healthy choices, families, schools, associations and movements, the world of production and consumers, in order to ensure that the choices are not imposed from above but matured and activated from below.
8. A city that combines the professionalism, local policies, and the institutional levels that shares best practices with other cities through networks.
9. A city that bases its knowledge on certain data and on a systematic alliance with local experts, universities and research institutions to develop the best policies on the environment and people's health.
10. A city in which the dissemination of information on environment and health is directly accessible to all, in a transparent way and not influenced by private interests, also thanks to the responsibility of the press.
